Subject MoEIS Subcommittee Update

We haven't gotten together in awhile; however, we have made some progress, as we've had a couple of generous volunteers to potentially test the data transfer module between DNR and industry, where industry (and local agencies) will conform their data to the appropriate file format. Currently, DNR and Tier Technologies are working on potential timelines for the data transfer project, also known as PAQ-30 in previous discussions. So while that's being negotiated/approved, there's unfortunately not that much to provide updates on, or to talk about in a subcommittee meeting. My feeling is that while the data transfer issue is progressing at its own pace, if there are other MOEIS-related issues that you would like addressed, we can work on those in the meantime, and potentially meet to discuss.

One previously discussed issue was continuity between screens of MOEIS, where there are occasions of redundant data entry. This is currently being fixed by our IT staff for the Fuel Combustion Worksheet (carrying over ash/sulfur content and Annual Throughput to the Emissions page), but if there are other areas of concern, DNR would like to improve the data entry process where possible. In addition, allowing more frequent batch prints out of MOEIS has been addressed in the most recent EIQ period. But if other issues are still pressing for you, let me know.

So again, apologies for not having much in the way of new news, but I wanted to give an update just to keep everyone informed.
